Health Initiative

# Strengthening Partnerships To Improve Student Health Outcomes

## During March and April we have:

- Launched the School Based Health Center Student Advisory Committee which had its first meeting on April 8. The committee then attended a valley-wide mental health consortium meeting later the same month, as well as joined other Student Advisory Committees at a meeting in May. *(More on this in the June project update.)*
- Continued to coordinate our support for students with chronic absenteeism (Multi-Tiered System of Support - MTSS) with school psychologist.
- Started the process of planning next school year's PIR days for school district staff. With the support of the Logan Health Training Center and employees from our school-based health center, our goal is to have all staff CPR certified.
- Connected with ACES, Threads and Grounded, three community organizations that also serve the needs of our students. We talked about how we can bridge the gap between those in need and the available resources.

Nurse Alyssa Grekoff and nurse Jenn Knopik visited with the staff at ACES to discuss collaboration for improved student health outcomes.

Nurse Alyssa Grekoff and Grounded co-founder Marci Truckey discussed ways to support our high school students.

Nurse Alyssa Grekoff and Threads founder Kim Rose with donations from Threads to Bigfork Schools.
